CANAM
BUILDINGS

A HISTORY OF PERFORMANCE

Canam-Buildings has been designing and fabricating with the Murox® building system featuring shop-fabricated, load-bearing walls since 1978. Murox is a premium building solution for superior-quality, custom-designed recreational buildings.

With its BuildMaster approach, Canam has redefined the way buildings are designed and built. BuildMaster applies a safer, faster and more collaborative approach allowing you to shorten your structural erection schedule by 15 to 25%.

The Canam approach: a personalized building plan

In choosing Canam for your building project, you are opting for quality products and services, a team of qualified professionals and exceptional customer service. Our team will take the time to thoroughly understand your needs as well as the various objectives and constraints associated with your project. Canam employs only accomplished construction specialists to ensure that your project is successful every step of the way.

A lasting solution

Among its numerous construction projects across North America, Canam has executed over 50 recreational infrastructure projects of all sizes. Whether you wish to build a garage, an arena, an entertainment facility, or any other type of multi-purpose center, Canam will be your partner of choice.

CANAM: AN ECOLOGICAL CHOICE

Canam constructs recreational facilities that integrate harmoniously with your community and the environment. Recycled steel, reduced construction waste and reliance on local suppliers all contribute to helping us honor this commitment.

Murox: fast-track construction, outstanding performance

Because of its unique design, the Murox building system can be erected in half the time it takes to erect a conventional structure. This means that you can take occupancy more quickly and therefore benefit earlier from a return on your investment. In addition, thanks to its resistant steel construction, your building will enjoy an extended service life. The unequalled flexibility of the Murox building system also allows you to make additions in the future and even reuse existing building components. This is yet another way that Canam adapts to your needs and maximizes the value of your investment.

Energy efficiency: a core concern

At Canam, we know that energy costs are an important consideration, which is why energy efficiency is a central feature of every project we undertake.

With its high thermal performance building envelope, the Murox building system will help you lower your daily energy costs.

BUILD **DIFFERENTLY**

For more than 50 years, Canam has developed a fast, reliable construction method that adapts to all your commercial, industrial, institutional or multi-residential projects. Whether you are building structures, floors, walls or steel building envelopes, our construction solutions are simple and straightforward. No surprises.
