

MUROX AIRCRAFT HANGARS

CANAM
BUILDINGS

BUILDING EFFICIENCY

Canam-Buildings has been designing and fabricating Murox building systems that incorporate shop-fabricated, load-bearing walls since 1978. Murox is a high performance construction solution for superior-quality, custom-designed aircraft hangars.

With its BuildMaster approach, Canam has redefined the way buildings are designed and built. BuildMaster applies a safer, faster and more collaborative approach allowing you to shorten your structural erection schedule by 15 to 25%.

Custom design

The Murox building system is ideal for any size hangar, with as much clear span and wide open floor space as your structure needs. Each hangar is designed to our customers' specifications. Whether your building is used to shelter ultra-light or corporate aircraft or used as a maintenance hangar or service center, our team of professionals will ensure that your project is engineered to meet your individual aircraft housing needs and local building code requirements.

Personalized approach and energy efficiency

Our engineering team handles all the technical aspects of a building and will work closely with you to ensure that your hangar's structural design and energy efficiency are optimized to meet its end use applications. With its high thermal performance building envelope certified up to R-35 and energy-efficient technologies, the Murox building system will help you lower your daily operating costs.

Shop fabrication in a controlled environment

The Murox shop-fabricated wall panels meet stringent quality standards. This solution will not only help you save on your total construction costs, but will also maximize the value of your building.

Fast-track construction and timely responses

Because of its unique design, the Murox building system can be erected in half the time it takes to erect a conventional structure. This means that you can take occupancy more quickly and therefore benefit earlier from a return on your investment.

Maximum value from investment

Thanks to its steel panelized construction, the Murox building system will extend the life of your aircraft hangar. Murox buildings can be expanded or taken down and relocated as your needs grow or change. With Canam, you can expand very easily and inexpensively and make the most effective use of your investment.

BUILD **DIFFERENTLY**

For more than 50 years, Canam has developed a fast, reliable construction method that adapts to all your commercial, industrial, institutional or multi-residential projects. Whether you are building structures, floors, walls or steel building envelopes, our construction solutions are simple and straightforward. No surprises.
