

# BUILDMASTER™

by Canam

## VALUE TRACKING

FIELD TESTS: Six trial projects were conducted between the fall of 2009 and the summer of 2010

**BuildMaster began with a simple premise: if we make the erector's job easier, the entire steel construction process becomes safer, faster and leaner.**

BuildMaster is a completely new and innovative way of thinking about the way buildings are planned, constructed and operated.

*"I proved to my client on this job that by using BuildMaster, we saved both money and time. Compared to other projects of the same size where we used the standard process, we saved a week on-site, but on the overall package I saved almost 8 weeks."*

**René Brisebois**  
Ex-Construction Manager, St-Laurent Construction

### FIELD TEST PROJECTS

- Marystown, Newfoundland Sobeys and NLC store
- Halifax, Nova Scotia Metro Transit repair garage
- Montreal, Quebec Schering-Plough warehouse
- Cornwall, Ontario Shoppers Drug Mart distribution centre
- Winnipeg, Manitoba Sysco regional warehouse
- Edmonton, Alberta Totem Building Supplies

**BuildMaster makes the whole construction process more predictable, shortening and solidifying the schedule for the entire steel building envelope by anywhere from fifteen to twenty-five percent, engineering out excuses and inefficiencies every step of the way.**

**THE PEACE OF MIND OUR PARTNERS DESERVE.**

*"Most General Contractors are comfortable if you can tell them leave, come back in three weeks and we'll give you a shell. Bottom line: if the GC gives the Erector a clean site, BuildMaster can cut erecting time by up to 25%."*

**Dwight Dellebuur**  
Ex-Foreman, KDM Erectors

*"There's no doubt about it, this is definitely a cleaner way, and for safety - absolutely - and for expediting, absolutely."*

**Laurier Trudeau**  
VP Field Operations, Abesco

*"I've now recommended that we should go with BuildMaster for every building we can, because it works."*

**Sandro Perruzza**  
Senior Site Supervisor  
JMC Building Development
